

TRUE SUCCESSES

STIMULATION PUTS WELL BACK ON TRACK TO BEING PROFITABLE

Challenge

A well that had been completed in 2013 began producing much lower than expected volumes.

Solution

StimWrx/PureChem recommended a stimulation program using their specialized interfacial tension reduction fluid. WRXSOL-ITR was intended to remediate fracture and drilling damage from the initial drilling as well as asphaltene and paraffin build up from production.

Benefit

The stimulation added 4m³ of oil per day and 3e³m³ of natural gas per day in addition to salvaging the costs associated with the drilling and completion of the well. Total job costs for the stimulation were under \$20,000. Return on investment was under one month and added a significant Proved Developed Producing reserve value for the next five years.

Area
Ricinus

Formation
Cadium

PureChem Product
WRXSOL-ITR
