

True Successes

Customized Demulsifier Treating Produced \$120,000 Savings

Challenge

An oil treating facility was not meeting pipeline specifications for six months resulting in oil being trucked to another facility for cleanup and shipping thus adding additional treating costs.

Solution

PureChem performed a system assessment in our Midale facility. It was determined that the incumbent product was over-treating. PureChem's DM-370 proved to be an excellent product to provide pipeline spec oil.

Benefit

DM-370 was injected at a reduced number of injection points resulting in cleaner water and pipeline spec oil. Daily chemical injection volumes were reduced from 25 liters to 10 liters and all trucking was eliminated resulting in extensive savings for the client.

The combined savings of reduced chemical costs and eliminated trucking costs produced a savings of \$120,000 per year.
